

## Co2olBricks

### Climate Change, Cultural Heritage & Energy Efficient Monuments

Climate Protection Strategy developed within the European Green Capital,

Stockholm, Sweden

#### Main Output:

“Furthermore, Climate Protection Strategy developed within the European Green Capital in Sweden will be complemented with the results of the project.”

#### Results:

The Climate Protection Strategy developed within the European Green Capital year in Stockholm was complemented with Co2olbricks issues as follows:

Tomas Örn from Co2olBricks project Partner 05, Stockholms Stadsmuseum participated at European Green Capital workshops. During the workshops he got in contact with a lot of people in the city who work with Co2olBricks issues, for example people who work with energy efficiency issues in the Gas-work area. So, the results from the discussions in the workshops during the European Green Capital year in Sweden, in which Cool Bricks participated, has been integrated in different documents, for instance the Action plan for the Gas works area.
